**DETAILED ACTION**

***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 77-85, drawn to methods of using a DNA transfer vector comprising "i) a 5' LTR... ..viii) sequences within each LTR which are necessary for integration of the vector...."

Group II, claim(s) 86 and 87, drawn to a method of increasing the resistance of a cell to infection by a retrovirus using one transposon-derived vector that is transcribed at a high efficiency.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The special technical feature of Group I is the vector and its elements i) – vii). The special technical feature of Group II is the transposon-derived vector. The elements required for the vector of Groups I and II are not equivalent. The vector used in the method of claim 86 in Group II need not have elements i) - vii) required for the vector used in the methods of Group I.
